Excerpt: . . . determine whether or not the balloon is rising or falling. If a tissue sheet falls, the balloon is rising; if it rises, the balloon is descending. It is not possible to tell by the eye or other sensation whether one is rising or falling as there is no sensation except that of motionless suspension. | The statoscope, altimeter, and barographs are instruments showing the rate of ascent or descent, and, in the case of the barograph an ink record is made of every portion of the journey. As the mass of gas in the balloon is very susceptible to heat and cold, a delicate thermometer, or better yet, a finely adjusted thermograph, is necessary to anticipate temperature changes. On the outside of the basket are hung canvas water bottles, life preservers, and a heavy anchor attached to about a hundred feet of rope. In addition to the preserved food carried within the basket, the supply of water is essential in this region because of the proximity of the desert and the life preservers for the like proximity to the sea. The anchor is used to retard flight when about to make a landing and not to hold the balloon. The most useful apparatus is the drag-rope which is a 300-ft. -inch rope, made into a ball and suspended from the side of the basket. The fastenings of the drag-rope are cut just when it is decided to make a landing. The rope trails on...
